

# ICCEvalsoftware

ICC Evaluation software is the ultimate tool for displaying and graphing profile data. Our program is so versatile it can read profile files from ICC high-speed profilers, light weight profilers and SurPro or ARRB Walking Profilers. The

program allows the user to graph up to ten profiles from any of the listed units simultaneously. These profiles can then be compared; in addition the software will generate a mean and standard deviation that are graphed as well. The program can be used to look

at multiple runs for repeatability testing. Users can graph and compare historic data with recently collected data. This program is extremely rich in features and is a real time saver.

## FOR UP TO 10 FILES

*Graph*

*Perform Standard Deviation*

*Calculate*

## OUTPUT FILE FORMATS

*ICC Binary*

*Texas Text*

*Comma Delimited*

*X-Y Elevation Text*

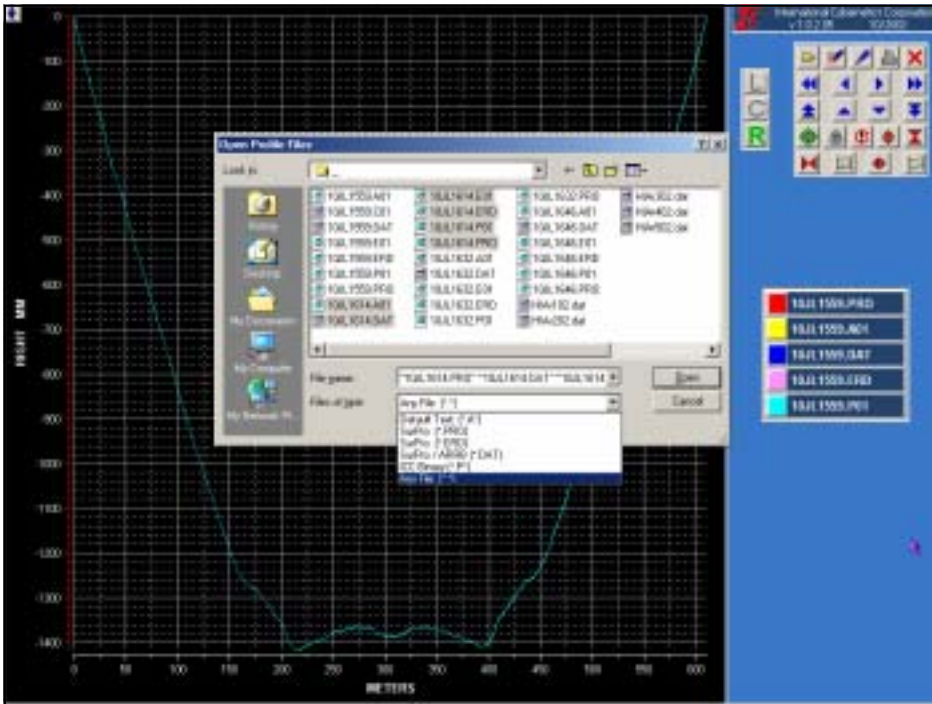

*Mean of up to Ten Files*

- Select and Hide Files
- Open, Add, and Delete from Screen
- Go to Station
- Display Header File Information
- Perform Standard Deviation
- Adjust Axis and Clip Data
- Save in New Output Format
- Expand, Contract, Move within Graphs
- Reposition any Graph in Relation to Another

## VARIOUS INPUT FILE FORMATS (UP TO 10 FILES)

- ICC Binary and Text
- SurPRO Binary and Text
- Texas Text
- ERD Text
- Arrb Text

## Ability to Display Left, Right, or Center Wheel Path

- Helps Find Problems in Data
- Can Show Alignment and Offset Problems
